

Allegiance Product Spotlight

Welcome to Allegiance's new product spotlight emails!

Each month we will feature one of our preferred vendor partners and their products and programs.

Scroll down to learn more about Galleri and how they would benefit your employees and their families.

Early detection can make a difference.

Why is early detection important?

The Galleri test can increase your chance of finding a signal associated with cancer early, when used in addition to single cancer screenings.¹ The Galleri test looks for a signal associated with active cancer and does not predict your future genetic risk for cancer.

Breast

Cervical

Colorectal

Lung

Prostate

Galleri

Only 5 recommended cancer screening tests exist today²: breast, colorectal, lung (for those at risk), cervical, and prostate

Who is eligible?

The Galleri Test is available as a covered benefit to eligible members and their covered dependents that meet the following criteria:

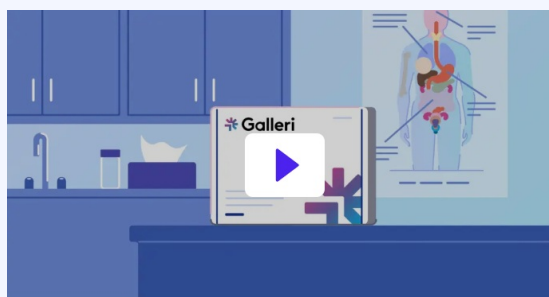

- 50+ years of age
- 40-49 with elevated risk factors
- Covered on an Allegiance member Medical Plan

While individuals ages 40-49 with certain risk factors may be at an elevated risk for cancer, Galleri was only studied in population age 50 and older.

What is the Galleri test?

Galleri is a multi-cancer early detection (MCED) test that looks for a cancer signal across more than 50 types of cancer. It's a screening test, which means that while it does not diagnose cancer, it can improve your chance of finding it early.
